Water Catchment Areas for Recreation

1

It is **really** important that we have as many submissions as possible; highlighting problems that you've had in getting permission to run events for your club, association or organisation. Detail instances where you have been questioned, fined or approached by Water Corp or DoW officers. Question the longevity of your organisation or foundation or club living under the draconian rules of DoW. Question the erosion of your facilities because of DoW policies.

We need discussion around the concept of community rights to access land in water catchments, we need discussion around the concept of accessing some water bodies for recreation and sport and the possibility of leaving some pristine. We need discussion around the concept of a State-Wide Policy for access and the need to protect special areas. We need discussion around water treatment rather than exclusion. We need to present a united front of recreation organisations against policy 13.

We will not get a chance like this again. A lot of effort has gone into getting us to this point from a large number of unsung heroes. Let's not waste this opportunity but make the most of it. Please send in a submission. Please ask anyone else who you think might be interested to also put in a submission.

If we get this change, it will be a fundamental restructure of the building blocks of our community, recreation, environment management and governance in WA and will effect future generations for many decades to come.
