## **The Most Economic Car in the World will be on sale next year.**

You could go to Shanghai for a vacation, buy two or more of these cars, one for your wife and one for yourself, and one for each of your kids, have them shipped to Canada and still spend less money than if you bought a car in Canada. Getting the car(s) into USA, is still an ordeal.

This is not a toy, not a concept car. It is a newly developed single seat car in highly aerodynamic tear-shape road-proven real car. It is ready to be launched as a single-seater for sale in Shanghai in 2010 for a mere RMB 4,000 (US\$600)!

Interested? Wait till you learn that it will cruise at 100-120 Km/Hr with an unbelievable 0.99litre/100Km (258 miles/gallon) !!

Impressed? Totally, after you have read all the details below about the hi-tech and space-age material input into this car!!!
